Thank you for purchasing my asset!!! Your feedback motivate me to create new assets and modify them.

1) The package is immediately ready for 3 types of render pipeline.

If you need a standard pipeline render, you only need to download what is highlighted in red

If you only need URP or HDRP then only one of the packages also highlighted in red

2) Then you definitely need to download Post Processing. It is free and will make the picture a level higher.

3) Unity modular system. This is another project of mine, but it was created on the same principle as in The Horror Church. The second half of the video shows how I assemble the scene at home.

https://www.youtube.com/watch?v=I9213HkEzjc

4) If there are problems with materials and shaders, then there is a link in the asset description that contains accurate information about what needs to be done.
